## About P2i

P2i Ltd was established in 2004 to commercialize liquid repellent treatments developed by the UK's Ministry of Defence. We make good products great by applying innovative science.

Our technology works by applying a nanometer-thin polymer layer over the entire surface of a product. Using an ionized gas (plasma), this layer is molecularly bound to the surface and will not leach away. The process offers superior oil and water repellency by reducing the surface energy to ultra-low levels.

The P2i brand reflects the three core features of our technology: Perform, Protect, Improve.

Our nano-coating technology can be applied to a wide range of products and materials without changing the look or feel.

In the Electronics and Lifestyle sectors the presence of P2i's technology is indicated either by Aridion™, our brand for Electronics, or ion-mask™, our brand for Lifestyle products. For industrial applications, the technology is covered by the corporate P2i brand.

P2i is a solution provider with product experience in many markets. Our patented nano-coating technology delivers performance benefits for a wide range of materials, including polymers, metals, fabrics, leather, ceramics, glass and paper.

The P2i technology is currently applied to a range of products such as electronic devices, footwear, performance textiles, eyewear, bio-consumables, medical devices, solar cells, engineered glass and filtration media.

### P2i's customers fall into five distinct market sectors:

#### Electronics

#### Lifestyle

#### Life Sciences

#### Filtration & Energy

#### Military & Institutional

We are now working with many of the world's leading brands and our proven technology is fast becoming a 'must have'.
