Transforming the  
reliability of  
electronic devices

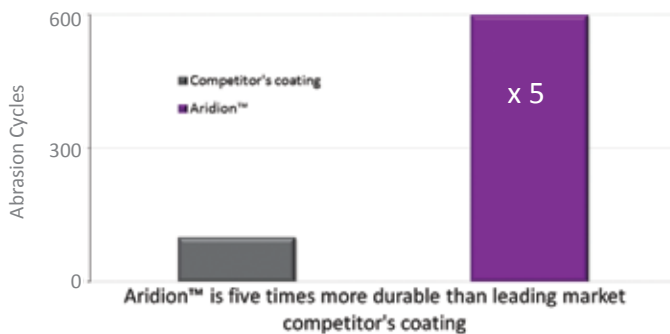

## Electronics and Aridion™

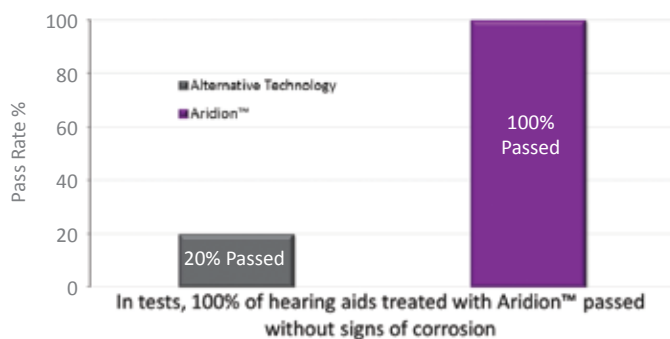

Sensitive electronic devices such as mobile phones, MP3 players and hearing aids can suffer irreparable damage when exposed to moisture, water and oil. While some defense is offered by protective casings, these can be bulky, making the devices difficult to use. Aridion™, P2i's brand for Electronics, is designed to transform the reliability of electronic devices by providing superior liquid repellency, with the added benefit of anti-staining properties.

Our proven nano-coating does not affect the working components of electronic devices, maintaining the look, feel, and functionality of the product.

### Durability Testing

### Hearing Aid Corrosion Protection Testing

Aridion™ coats every aspect of a finished product at a nanoscopic level and protects much more thoroughly than alternative approaches. The result is a truly durable liquid-repellent coating that substantially reduces warranty failure and repair costs.

### Benefits of Aridion™

**Protective:** Aridion™ delivers an amazing level of liquid repellency to whole devices, so that on treated surfaces, liquids form beads and simply roll off

**Reliable:** Aridion™ transforms the reliability of electronic devices containing delicate, expensive components at high risk of liquid damage through corrosion or electrical failure

**Durable:** The liquid repellent nano-coating is physically bonded at a molecular level, so it lasts as long as the material it protects

**Invisible:** The unique ultra-thin Aridion™ protective layer invisibly improves the performance of electronic devices without affecting the product's look or feel
